

Creating safe
and secure
healthcare
environments

The right partner for healthcare safety and security

The brands of Allegion™ have more than 100 years of experience in keeping people safe and secure where they live, work and visit. We believe optimizing a healthcare facility's physical environment can have a direct link to improved patient outcomes, safety, and satisfaction; physician and staff safety, security and satisfaction; and operational efficiencies and financial outcomes. Using our expertise we will work alongside your organization to identify and prioritize initiatives that will help you achieve your overall goals.

We deliver:

- Proven and reliable solutions that address your most critical and unique needs
- Dedicated resources that work with you to plan, execute, and continuously improve
- Security management and code compliance expertise that lets you confidently create a balanced environment of safety and openness
- A trusted partner that can help you select the right solution for today, while laying the groundwork for where you want to be tomorrow
- Innovative solutions backed by world-class service and support

By your side from planning to implementation and beyond

Whether you're designing a new facility or working to improve an existing one our sales team, technology consultants and specification writers will work with you at every step to ensure you have the best solution for every opening and access control requirement.

Our services and support include:

- Specification and opening planning assistance
- Local and national codes and regulations proficiency
- Application and technology expertise
- Security and safety assessments and consultation
- Knowledge and tools for ongoing support
- World-class training and service

Solutions that help

The physical environment of a healthcare facility is the foundation of all that occurs in it. At Allegion we offer a wide breadth of solutions from proven brands that help you accomplish your overall mission and goals:

Patient outcomes, safety, and satisfaction

Creating an environment that improves outcomes, mitigates risk and enhances the patient experience is the goal of every healthcare organization. Our products and services can assist you in building a better environment that advances these objectives and reaches those goals.

Quiet openings – We have designed our exit devices and other door hardware to operate at a dramatically reduced noise level, allowing patients to get the rest they need and improve overall satisfaction with your facility.

Infection prevention – Door hardware is one of the most touched surfaces in any facility. Our antimicrobial solutions help reduce the bacteria load and assists in lowering the risk of infection.

Staff and physician safety, security and satisfaction

Providing a safe and secure workplace is imperative for creating an environment optimized for patient care. Knowing that technology and procedures are in place to protect them and their patients allows staff to concentrate on the job at hand and be more satisfied with their place of employment.

Life safety – Our staff of experts is available to track local and national code changes, ensure compliance at all levels, identify and prioritize projects and increase overall safety.

Secure environments – With our expertise and cost-effective solutions we can make your access control system more comprehensive and efficient, increase security of at-risk areas, and create a safe and secure environment that allows staff to focus on patient care.

Operational efficiencies and financial outcomes

Healthcare organizations look for every opportunity to operate more efficiently and protect the bottom line. We can work with you to turn your physical environment into an asset meeting financial and operational goals important to your overall success.

Ready for the future – Healthcare facilities are fast-paced environments and need technology that can keep up. Our solutions in access control, credentials, and new technologies can meet your current requirements, are upgradeable, and offer cost-effective migration paths to meet future needs.

Standardization of solutions – Our broad portfolio of solutions allows for standardization across one or all of your facilities, providing cost-effective options and efficient installation, maintenance and service, resulting in increased operational efficiencies.

Defined return on investment – Our ROI models can provide an overall positive life cycle cost of ownership through increased reliability, reduced service calls, or favorable financial implications in other areas of the business.
